

Cool Returns Program for Cooperative Members

**\$100
REBATE**
FOR INSTALLATION OF
LOAD MANAGEMENT
SWITCH

Frontier's Cool Returns program helps keep members' bills in check during the hottest times of the year.

With the installation of a radio-controlled switch, the energy consumption of your air-conditioning system will automatically be dialed down during times of peak demand—usually from about 2-6 p.m. on the hottest days of the year.

This helps you save money on your bill while helping us reduce stress on the electric grid. Load management periods are typically very brief, and the comfort of your home should not be affected.

The switch does not control your thermostat or harm your air-conditioning system.

SPECIFIC REQUIREMENTS: Electric cooperative members who own a home with a central air conditioner, or an air-source heat pump are eligible to enroll in Cool Returns.

Homeowners with window air conditioners are not eligible.

Monthly bill credit of \$4.00 for June, July, Aug. and Sept. will also be applied to your bill each year for participating in this program.
